

NAME

xenconsole - xVM console daemon

SYNOPSIS

/usr/lib/xenconsole

DESCRIPTION

The xenconsole daemon provides control of the system consoles of Solaris xVM domains. To actually connect to a console, use the xm console command. See xm(1M).

Service Management Facility Support

The xenconsole service is managed by the service management facility, smf(5), under the service identifier:

```
svc:/system/xvm/console:default
```

Administrative actions on this service, such as enabling, disabling, or requesting restart, can be performed using svcadm(1M). The service's status can be queried using the svcs(1) command.

ATTRIBUTES

See attributes(5) for descriptions of the following attributes:

ATTRIBUTE TYPE	ATTRIBUTE VALUE
Availability	SUNWxvmu
Interface Stability	Volatile
